### **Agenda No.1: Regarding Justification for submitted Research proposal from Mrs. Mohini Patidar for financial assistance:**

**Resolution No. 1:** In the previous meeting Mrs. Mohini Patidar was asked for the justification of Journal of Chemical Health Risks are included in the Scopus database or not. After scrutiny the committee members came to the conclusion that Journal of Chemical Health Risks is a cloned journal and accepting the research papers and publication fees from authors in a very un-ethical manner. So to prevent this type of episode in future the council decided to restrict the authors not to publish in any type of journals prior approval from the academic council. Committee also instructed each member to search for the authenticity of the journal after receiving any proposal for financial assistant in future and report to committee in next meeting. Authors are advised to give at least five journals in the proposal so that if the paper is rejected in one journal same can be submit in other journals mentioned in the list and approved by Academic council. Academic council also instructed to search for the procedure so as the fake journal & cloned journal can be brought into notice of faculty members and publishing in such journal can be prevented.

Abstract up to 500 words	<p><b>Objective:</b> The plant <i>Bougainvillea spectabilis</i> is traditionally used as anti bacterial, anticancer, anti diabetic, anti fertility, anti- fungal, anti-inflammatory, anti hyperlipidemic, anti oxidant, antiulcer, antiviral, hepatoprotective, and thrombolytic activities. The present study was carried out to evaluate the effect of <i>Bougainvillea spectabilis</i> (ethanolic and aqueous extract p.o.) on duodenal ulceration. <b>Materials and Methods:</b> The study was carried out on the duodenal ulceration model by using Cysteamine hydrochloride. Ranitidine (20 mg/kg) was used as standard drug. Then the aqueous and ethanolic extract (200 mg/kg) of the plant is used as the treatment group, which is compared against the potent duodenal ulcer causing agent Cysteamine hydrochloride. <b>Results:</b> Both the extracts of the plant <i>Bougainvillea spectabilis</i> showed potent duodenal ulcer healing effect in Cysteamine induced duodenal ulceration. The ethanolic extract of the plant <i>Bougainvillea spectabilis</i> showed more potent activity than aqueous extract. <b>Conclusion:</b> The plant <i>Bougainvillea spectabilis</i> increased healing of gastric ulceration and prevented the development of experimentally induced duodenal ulceration in rats.</p>

Paper title	Cardio protective effect of <i>passiflora nepalensis</i> wall extract, On Isoproterenol induced Myocardial Infarction in Rats
First Author name	Narendra Singh Bhadore
Journal name	Asian Pacific Journal of Tropical Biomedicine, IJPER
Journal website	<a href="https://journals.lww.com/aptb">https://journals.lww.com/aptb</a> , <a href="http://www.ijper.org">www.ijper.org</a>
ISSN number	2221-1691, 0019-5464
Abstract up to 500 words	The present research was conducted to investigate the cardio protective role of <i>passiflora nepalensis</i> leaf extract against Isoproterenol induced myocardial necrosis in rats and to compare with $\alpha$ -tocopherol, a known cardio protective antioxidant. Male Wistar albino rats were randomly divided into five groups (n = 6) and treated as per treatment protocol with two different dose of <i>passiflora nepalensis</i> Methanolic extract (250 and 500 mg/kg body weight) 6 days per week for 4 weeks. At the end of the treatment all the rats (except control rats) were administered with Isoproterenol (85 mg/kg) two consecutive days and subjected to biochemical and histopathological estimation. Isoproterenol (group II) induced the oxidative myocardial damage via alteration in the endogenous antioxidant enzymes and myocardial marker enzymes. <i>passiflora nepalensis</i> extract in all two doses (group III, and IV) shows protective mechanism via decreasing thiobarbituric acid reactive substance (TBARS) and enhancing the endogenous antioxidant enzymes (reduced glutathione (GSH), superoxide dismutase (SOD) and catalase). In <i>passiflora nepalensis</i> treated groups significant increase ( $p < 0.001$ ) of LDH in heart homogenate and decrease of SGOT and LDH in serum were observed. Microscopic studies in ISO-treated animals revealed mitochondrial swelling, leukocyte infiltration, lipid inclusions and myofibrillar loss whereas the pre-treatment with <i>passiflora nepalensis</i> led to a lesser degree of ISO-induced histological alterations. The extract effect was compared with the reference standard $\alpha$ -tocopherol which also offered similar protection in biochemical and histopathological changes. Thus, the study shows that <i>passiflora nepalensis</i> Methanolic extract exhibits significant antioxidant activity and protect the heart from free radical mediated toxicity of Isoproterenol.
