## Chairman's Message

I am delighted to announce the launch of "PULSE" e-bulletin, GRY's newsletter for June 2024! Our institute is dedicated to empowering students to become responsible citizens through value-based education. This newsletter acknowledges their success stories, achievements, and progress, while recognizing the hard work of our staff and faculty.

I thank everyone for their support and commitment to our mission. "PULSE" showcases our academic and co-curricular activities, achievements, and progress, reflecting our dedication to quality education. I wish the editorial board and entire team all the best for a successful and bright future of PULSE!"

**Sh. Arun Yadav**  
Chairman, JNCET

## Principal's Message

I am thrilled to be part of an institution dedicated to fostering student's growth and potential. The college's progress in integrating value-based education with modern teaching methods is truly commendable. Our e-bulletin, "PULSE", is a vital platform for sharing valuable insights, celebrating achievements, and showcasing college developments, events, and activities. I extend my sincere appreciation to the editorial team, coordinators, staff, and students for their tireless efforts in producing this publication. The June 2024 issue is a testament to their dedication and am confident that this newsletter will provide a valuable platform for students and faculty to showcase their talents and make meaningful contributions to the profession.....

**Dr. Sujit Pillai**  
Principal, GRYIP

### Editor's Message

We the editorial committee feels proud to publish biannual newsletter named "PULSE", the e-bulletin edition (Jan 2024 to Jun 2024) of GRY Institute of Pharmacy, Borawan. This e-bulletin is a compilation of new achievements & furnishing information about the activities of the institution. In this edition, we have tried to capture events and achievements of recently concluded session.

We are grateful to our chairman and secretary for their support to release this e-bulletin. We extend our sincere thanks to our principal for granting the permission to release e-bulletin and faculty members for their suggestions throughout the process of publication.

### BIOPHARMACEUTICAL PRODUCTION: INNOVATIONS AND TRENDS

Biopharmaceutical production is on the cusp of a transformative era. As science, technology, and manufacturing practices continue to evolve, the biopharmaceutical industry is poised for significant advancements. This article explores the exciting innovations and trends that will shape the future of biopharmaceutical production.

The production of biopharmaceuticals, including vaccines, monoclonal antibodies, and other therapeutic proteins, plays a pivotal role in healthcare. Biopharmaceuticals offer targeted and often curative treatments for various diseases. To meet the growing demand for these life-saving therapies, the biopharmaceutical industry is embracing cutting-edge innovations and adopting new trends.

### BIOPHARMACEUTICAL TRENDS & INNOVATIONS

#### Single-Use Bioprocessing

Single-use bioprocessing systems consist of disposable components, such as bags, tubing, and filters, which are used once and then discarded.

#### Bioprinting and 3D Biomanufacturing

In the future, biopharmaceutical production may involve printing tissues and organs for transplantation. This innovation has the potential to address the organ shortage crisis and significantly impact healthcare.

#### Continuous Bioprocessing

Continuous bioprocessing is revolutionizing the industry by enabling the uninterrupted production of biopharmaceuticals.

#### Personalized Medicine

Personalized medicine takes into account an individual's genetic, environmental, and lifestyle factors to customize treatment plans. It offers the potential for more effective therapies with fewer side effects.

#### Gene and Cell Therapies

Gene and cell therapies involve the introduction of genetic material or modified cells into a patient's body to treat or prevent disease.

#### Biopharmaceutical Trends & Innovations

#### Biosimilars and Biogenerics

Biosimilars are biologic products that are highly similar to an already approved reference biopharmaceutical. Biogenerics, on the other hand, are generic versions of biopharmaceuticals, similar to traditional generic drugs.

#### Artificial Intelligence and Big Data Analytics

AI can optimize bioprocesses, predict potential failures, and analyze vast datasets for research and development.

#### Single-Use Bioprocessing

Single-use bioprocessing systems consist of disposable components, such as bags, tubing, and filters, which are used once and then discarded.

### CANCER CASES ON THE RISE

An estimated 35 million new cancer cases to occur in 2050, WHO warns

- While experts have made significant advances in treating cancer, cancer continues to remain a global health concern.
- The latest report from the World Health Organization predicts that there will be over 35 million new cases of cancer in 2050, a significant rise from the approximate 20 million cancer cases that occurred in 2022.
- Reports from the International Agency for Research on Cancer found that lung, breast, and colorectal cancers are the most common types worldwide.
- The data point to several factors contributing to cancer cases and allows for exploring mitigation and prevention strategies.

Cancer continues to be a global burden, making it critical to collect data in this area regularly. The International Agency for Research on Cancer (IARC) is part of the World Health Organization (WHO).

According to one of the IARC reports worldwide, the top three most common cancers in 2022 were lung, breast, and colorectal cancer. Among men and women, lung cancer accounted for 12.4% of all cancer cases.

#### Factors contributing to rising cancer cases

The burden of cancer is related to several factors. The statement from WHO suggests that people in countries with a lower human development index may receive diagnoses later and have a lower chance of access to quality treatment. This can significantly increase the risk of poor cancer health outcomes. Another struggle is people's ability to get governmental assistance for cancer-related services.

Environmental factors and lifestyle choices also contribute to cancer's impact. For example, the WHO statement suggests that the increase in lung cancer cases is related to the continued use of tobacco in Asia. They also note that the data reflects increases in the aging population and population growth.

Alcohol use, tobacco use, and obesity continue to contribute to cancer rate increases overall. Exposure to air pollution is also a likely contributing factor. "There are major disparities in healthcare and the disproportionate increase in cancer cases among poorer countries is striking. The rise is related to poor nutrition, smoking, lack of public awareness and limited access to screening.

**Articles**

**Cancer Prevention**

WHO works with Member States to strengthen national policies and programmes to raise awareness and, reduce exposure to cancer risk factors, and also ensure that people are provided with the information and support they need to adopt healthy lifestyles.

To strengthen national efforts to address the burden of cancer and other noncommunicable diseases (NCDs), the WHO Global Action Plan for the Prevention and Control of NCDs 2013–2020 provides a road map to reduce premature mortality from NCDs by 2025 through targeting many of the risk factors below:

**Risk Factors For Cancer**

### HEART ATTACK DIAGNOSIS INNOVATION - FROM AN HOUR TO EIGHT MINUTES

Sponsored Content by Siemens Healthineers  
Reviewed by Maria Osipova

device can help determine if someone is having a heart attack in as little as eight minutes with just a finger stick of blood. Traditionally, getting such results required a larger blood sample collected via a venous blood draw, which could take up to an hour. Our device streamlines this process, providing quick and accurate results, which are crucial for timely treatment.

#### **How does device benefit patients, doctors, and emergency care teams**

Patients do not have to wait long for test results, which means they can receive the right treatment faster, increasing their chances for recovery. Doctors can immediately act on the test results, particularly crucial in cases like heart attacks where every minute counts.

Emergency care teams can quickly distinguish between those who need immediate medical attention and those who do not. Additionally, our device allows central lab teams to focus on other tests while still tracking decentralized testing via handheld devices, which can help alleviate overcrowding in emergency departments.

#### **address overcrowding in emergency departments**

By simplifying the testing process and accelerating the turnaround time from test to result, our device has the potential to alleviate overcrowding in emergency departments, where it is a pressing issue. This is because patients can be triaged more efficiently, and those who require immediate attention can be identified and treated promptly, freeing up resources for other patients.

जहाँ नारी की पूजा, वहाँ ईश्वर का वास - अरूण यादव

में आज की नारी है, इतिहास रचने वाली है, जी.आर.व्हाय, इंस्टीट्यूट ऑफ फार्मसी, बोरावा में अंतर्राष्ट्रीय महिला दिवस का आयोजन

पूर्व केन्द्रीय कृषि राज्यमंत्री अरूण यादव ने अंतर्राष्ट्रीय महिला दिवस के अवसर पर मंगलवारी को बाराई एवं पुष्पावध्यायों देते हुए अपने संबोधन में कहा कि मनुष्यवृत्त को सर्वोपरि यह दिवस अरूण यादव में महत्वपूर्ण है। जहाँ नारी की पूजा होती है वहाँ ईश्वर का वास होता है। श्री यादव ने अपने संबोधन में महिला सशक्तिकरण के संकेतक का उदाहरण देते हुए कहा कि प्रकृति की शक्ति का प्रतीक है। नारी का विकास ही राष्ट्र की शक्ति का प्रतीक है।
